

#Problem Statement: The Subscription Tracker & Renewal Dashboard

The Mission:

Build a personal finance dashboard that aggregates a user's recurring SaaS applications and streaming subscriptions, tracks renewal dates, and monitors monthly cash-flow burn.

Frontend UI & User Interaction:

- **The Entry Form:** The user inputs details into an onboarding form containing a text input for the service name, a currency number field for the cost, a dropdown menu selector for the Billing Cycle (Monthly or Yearly), and a visual calendar date-picker to select the Next Renewal Date.
- **The Metrics Row:** The top layout features two prominent digital cards: Total Monthly Burn Rate and Upcoming Renewals Alert Count.
- **The Subscription Grid:** Below the metrics, active subscriptions are rendered in a structured table layout. If a subscription's renewal date falls within 7 days of the current calendar date, the row highlights with an amber caution badge reading "Renewing Soon". Each row contains an interactive "Active / Paused" Toggle Switch.

Backend Logic & State Management:

- **Cost Uniformity Engine:** Because subscriptions have varying billing cycles, the logic must parse the incoming form submissions and normalize annual subscription values down to a monthly rate to accurately calculate the top dashboard metrics.
- **Date Intersect Calculator:** The system evaluates the parsed calendar string dates against a fixed current date to determine the exact number of days remaining until the next billing event occurs, flagging items that meet the urgent criteria.

The Vibe Check:

Clicking the row's **"Active / Paused" Toggle Switch** should not delete the item from the data collection. Instead, switching it to "Paused" must instantly grey out that table row visually on the frontend and trigger a backend state change that excludes that specific cost from the top Monthly Burn Rate metric, providing a real-time savings simulation.

#Candidate Guidelines: Please read the following instructions carefully before appearing for the assessment.

Assessment Details:

- The Vibe Coding Round will begin sharply at **08:00 PM** and conclude at **09:40 PM**.
- Candidates are expected to join the assessment platform (Unstop) 10 mins prior.
- Once the round begins, the detailed problem statement will be shared on Unstop.

Proctoring & Setup Requirements:

- You must share your entire screen throughout the assessment.
- Your camera & mic must remain switched on for the complete duration of the round.
- Unstop will proctor the assessment throughout the session.
- Any suspicious activity, violation, or attempt to bypass proctoring guidelines may impact your score and candidature.

Use of AI Tools

- Candidates are permitted to use any AI tool to complete.
- The evaluation will focus not only on the final solution but also on your understanding of the implementation during the subsequent Viva round.

[IMP] Submission Process:

- We suggest spending the first 5 mins understanding the problem statement.
- Plan your time effectively to ensure you have sufficient time to upload your solution to GitHub and complete the submission process before the deadline.
- Maintain meaningful and incremental Git commits that clearly reflect the functionality implemented at each stage of development.
- Follow a clean, scalable, and well-structured architecture for both the frontend and backend components of your solution.
- All business logic, calculations, validations, and computations should be implemented on the server side. The frontend should primarily handle presentation and user interactions.

- After uploading your code, submit the GitHub repository link on [Unstop \(Vibe Coding Submission\)](#).
- **The GitHub link must be submitted no later than 9:40 PM (22 June).**
- Any submission received after 9:40 PM will be automatically disqualified.
- We will verify GitHub commits and upload timestamps. Any edits, commits, or modifications made after 9:40 PM (22 June) will lead to disqualification.
- Ensure that the **GitHub repository is publicly accessible** for review.

Restrictions:

- Mobile phones/Calculators or any other device is strictly prohibited.
- **Do not connect headphones or any Bluetooth-enabled devices during the round.**
- Please ensure that all system notifications, pop-ups, and distractions are disabled.
- External assistance from any individual is strictly prohibited.

Viva Round:

- Candidates who submit their solutions will also participate in a Viva discussion based on the code they have submitted.
- Schedules for the Viva round will be shared after the round completion.

Candidate's Responsibility:

- A quiet, well-lit environment & a stable/reliable internet connection.
- A fully charged laptop and access to power backup if required.
- Sufficient access to the AI tools you intend to use, including any token, usage, or subscription limits.

Final Note

- No re-attempts or extensions will be provided under any circumstances.
- By participating in this round, you agree to adhere to the assessment guidelines and maintain the highest standards of integrity and professionalism.

We wish you all the best for the Vibe Coding Round!
